TECHNICAL EXERCISE

Cursor SDK Prototype

FORMAT	DURATION	PREP REQUIRED
Live Prototype Demo & Discussion	**45 min total** Demo expected ~20 min, plus live Q&A	**Working prototype**

THE PROMPT

Build a prototype using the **Cursor SDK** that solves a meaningful, non-trivial problem within the Software Development Life Cycle of an enterprise organization (industry of your choice). Choose one of the four problem spaces below (or bring your own of equal depth) and go deep. Be ready to demo your working prototype, walk through your architecture, discuss design decisions and trade-offs, and extend a part of your solution live.

EXPECTATIONS

We're looking for a thoughtful, intentional solution to a well-defined problem. **Aim high:** show an advanced, real-world engineering workflow, ideally asynchronous or multi-step, not a basic integration or an onboarding helper. Strong prototypes are well-scoped, opinionated, and grounded in real enterprise constraints. Come ready to think out loud and go wherever the conversation takes you.

CHOOSE ONE PROBLEM SPACE — GO DEEP

EXAMPLE A

Legacy Application Modernization

Modernize a business-critical legacy application while keeping the lights on for the business.

EXAMPLE B

Bug, Vulnerability & Incident Response

Triage and remediation of bugs, security vulnerabilities, or live incidents at enterprise scale.

EXAMPLE C

Runbook & API Spec Sync

Keep runbooks in sync with code changes, or upgrade an application to a new API spec.

EXAMPLE D

Choose Your Own

Bring a problem of equal depth — a meaningful, non-trivial enterprise SDLC workflow with advanced, asynchronous automation.

DURING THE LIVE SESSION — COME PREPARED TO

- **Explain the problem you chose** and why it matters in an enterprise context.
- **Walk through your working prototype** — demo it live, not via slides.
- **Discuss key design decisions** and trade-offs.
- **Highlight limitations** and how you would evolve the solution.
- **Extend a part of your prototype** based on a prompt from the interviewers.

BEFORE YOU BUILD

> Building on a company-managed Cursor account can restrict access to some models and other advanced features. Sign in at **cursor.com** with a personal account to make sure the full toolset is available. **Send your recruiter the email on your personal Cursor account** and we'll add credits so you don't hit usage limits or spend your own money.
